

AUTOMOTIVE MANUFACTURING · SAP S/4HANA

Global Automotive Manufacturer

A leading Japanese automotive manufacturer was facing growing challenges in managing its complex global shipping operations. With a vast supply chain involving multiple vendors and distribution centers, coordinating shipments across global partners became increasingly difficult — resulting in rising costs, frequent delays, and limited visibility. To regain control and optimize performance, they implemented a centralized transportation management solution that could seamlessly integrate with their SAP S/4HANA ERP, supporting streamlined, multi-mode, and scalable shipping.

ABOUT

An operation too large for siloed systems

As one of the world's largest automotive manufacturers, the company operates across multiple continents with a workforce of 200,000 employees.

Managing an operation of this scale required complete visibility into shipments to prevent delays, control costs, and ensure on-time deliveries.

THE SCALE, IN NUMBERS

01

200,000

employees worldwide

02

4M+vehicles sold globally in
2024

03

1.5Mof those in the United
States

Without a centralized system, logistics became increasingly difficult — leading to inefficiencies and revenue loss.

THE CHALLENGES

Four breaks in the chain

01

Disconnected Transportation Processes

Separate workflows across multiple business units led to inefficiencies, miscommunication, and inconsistent shipping practices.

02

No Integration with SAP S/4HANA

Teams manually entered order and shipment data, increasing errors and slowing down fulfillment.

03

Complex International Shipping

Inbound and outbound global shipments meant varying customs regulations, carrier requirements, and limited visibility.

04

Manual Procurement & Invoicing

Freight procurement and invoicing were handled by hand across teams, producing inconsistent carrier agreements, invoice errors, and poor cost visibility.

THE SOLUTIONS

What FreightPOP put in place

Centralized Transportation Management

FreightPOP unified transportation operations across business units, consolidating carrier management, rate shopping, and tracking into one platform.

SAP S/4HANA Integration

Seamless integration with SAP enabled automated, bi-directional data flow, eliminating manual entry and keeping systems aligned.

Inbound & Outbound Visibility

End-to-end visibility for domestic and international shipments, with multi-carrier support to optimize cost, mode, and transit time.

Automated Procurement & Invoicing

Automated workflows replaced manual processes, reducing errors and streamlining approvals while centralizing carrier agreements and improving cost visibility.

Custom-Built Mobile Application

A mobile-friendly interface focused on scanning and shipment approval, enabling faster handling and real-time updates from the warehouse floor or on the go.

BUSINESS IMPACT

The results

15%

reduction in freight costs

Through real-time rate shopping and multi-carrier optimization

3%

savings through invoice audit automation

By replacing manual procurement and invoicing with automated workflows

40%

faster order fulfillment

By improving shipment visibility and automating carrier selection

40%

improvement in on-time delivery

With mobile-enabled approvals, real-time tracking, and label printing

ESTIMATED ANNUAL SAVINGS

\$500K–\$1.5M

in estimated annual savings from streamlined freight management across procurement, rate shopping, tracking, and invoicing.

KEY INSIGHTS

Managing a global logistics operation with nearly 200,000 employees and millions of vehicles sold demanded more than spreadsheets and siloed systems.

With FreightPOP's Transportation Management System, the company unified every part of their supply chain — procurement, rate shopping, tracking, and invoicing — into a single, connected platform. The SAP S/4HANA integration automated key workflows, while mobile access kept teams agile and responsive. The result: faster decisions, connected operations, and a logistics platform built to scale globally.
