

HVAC PARTS & METAL FRAMING · NEW JERSEY

Elgen Manufacturing adds carriers freely — at no added cost

As the contract logistics and distribution leader for a successful HVAC contractor manufacturing company in New Jersey, Christian Mannino knows his fair share about the TMS features needed to run the business. Prior to working with FreightPOP, Mannino and the other staff at Elgen Manufacturing faced uphill struggles with their transportation management software, which provided a rudimentary solution, at best.

ABOUT

About Elgen

Elgen Manufacturing is a leading provider of HVAC parts, components, and metal framing solutions, serving customers across the United States, Canada, and South America. Known for its commitment to quality and customer satisfaction, Elgen delivers reliable, high-standard products designed to exceed expectations.

With decades of expertise, the company continues to innovate and adapt to meet the evolving needs of its clients — across a distribution network that keeps growing in both volume and geography.

03

South America

CONTEXT

In logistics

Elgen Manufacturing's logistics operations support a nationwide and international supply chain, ensuring the efficient distribution of HVAC parts, components, and metal framing products. To enhance efficiency and streamline their shipping processes, Elgen sought a solution that could centralize and automate their freight operations, providing better visibility and control over their logistics lifecycle.

CHALLENGES

The challenges with their previous TMS

BEFORE

01

Cost Inefficiencies

Elgen's previous TMS lacked flexibility, requiring the team to contact their provider to make even simple adjustments, such as adding or removing carriers. That limited customization prevented effective carrier comparison — a critical capability for managing transit times and rates efficiently.

02

Workflow Bottlenecks

The clunky, user-unfriendly platform made it challenging to view and compare carriers, leading to missed cost-saving opportunities and hindering new carrier relationships.

03

Lack of User-Friendly Features

The outdated system was difficult to navigate and failed to deliver the core functionality expected from a TMS, slowing workflows and frustrating the team.

WITH FREIGHTPOP

01

Self-Serve Carrier Management

Elgen adds, removes, or updates carrier partners themselves — no support ticket, and no per-carrier setup fee.

02

Side-by-Side Rate Comparison

Spot quoting across multiple carriers in one interface makes rates and transit times directly comparable on every shipment.

03

One Streamlined Interface

Every mode — LTL, TL, parcel, ocean, and air — is quoted, booked, and tracked in a single system built for daily use.

IN THEIR WORDS

“As a user, I didn't have the ability to make simple adjustments — any and all setting and carrier changes required reaching out to the software company to perform the updates. The system simply wasn't flexible, and couldn't perform the functions that a TMS should be able to, right out the box.”

Christian Mannino · Director of Logistics, Elgen Manufacturing

SOLUTIONS

What FreightPOP put in place

01 Flexible Carrier Management

FreightPOP's streamlined interface gave Elgen the ability to easily add, remove, or update carrier partners — greater control over shipping operations and genuinely competitive carrier selection.

02 Comprehensive Shipping Support

The platform supports all shipping modes — LTL, TL, parcel, ocean, and air — so Elgen handles diverse transportation needs seamlessly within a single system.

03 Advanced Reporting Capabilities

Robust reporting offers detailed insight into shipping operations, enabling data-driven decisions and helping Elgen optimize both cost and performance.

04 Customizable Features

With the flexibility to add new features and functionality, FreightPOP adapts to Elgen's evolving needs — a future-ready solution tailored to their business.

05 Responsive Customer Support

A dedicated customer service team provides timely, effective support, so Elgen can troubleshoot quickly and keep operations running smoothly.

RESULTS

Flexibility, without the surcharge

CARRIER ADDITIONS

\$0/ea

Unlimited carriers with no increase to monthly cost — so trying a new carrier is a decision about service, not about budget.

FLEXIBILITY & COST CONTROL

Carriers on Elgen's terms

Elgen adds, removes, or adjusts carrier partners without incurring extra costs, comparing rates and transit times in one streamlined interface for informed, cost-effective decisions.

RATE OPTIMIZATION

Best rate, every shipment

Spot quoting across multiple carriers secures the best available rate — and unlike TMS platforms that charge per carrier setup, adding carriers never raises the monthly bill.

CUSTOMIZABLE & RESPONSIVE SOFTWARE

Changes without hidden fees

FreightPOP's team quickly adapts the platform to support Elgen's specific needs, providing customizations without hidden fees or lengthy delays — keeping the TMS aligned with evolving logistics requirements.

“Some TMS systems charge by carrier set up, but FreightPOP allowed us to add as many carriers as we want, without adding to our monthly cost. We can try out new carriers and spot quote across multiple carriers to ensure we are getting the best rates. FreightPOP doesn't nickel and dime users for change requests or customizations — the FreightPOP team can easily and quickly adapt the software to support us.”

Christian Mannino · Director of Logistics, Elgen Manufacturing

KEY INSIGHTS

By adopting FreightPOP's TMS, Elgen Manufacturing revolutionized its shipping operations — optimizing logistics across an extensive supply chain.

The platform's flexibility to add unlimited carriers, advanced rate comparison tools, and seamless customization streamlined Elgen's freight management process. FreightPOP's intuitive interface reduced manual effort, enhanced visibility, and empowered Elgen to secure the best shipping rates. These improvements have positioned Elgen Manufacturing to meet the demands of its growing distribution network with greater efficiency, cost control, and adaptability.
